

Close Off relation to Packing Type (EP vs EB)

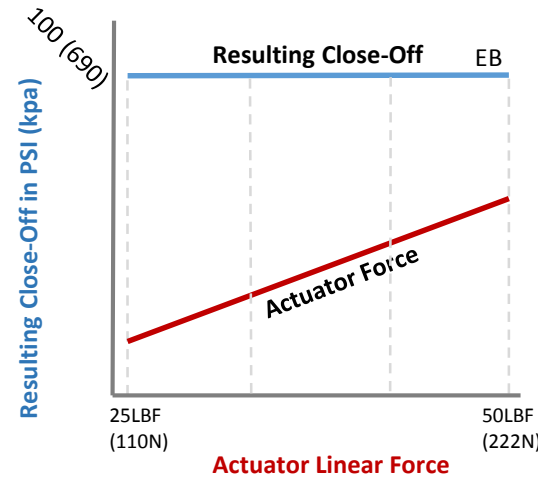

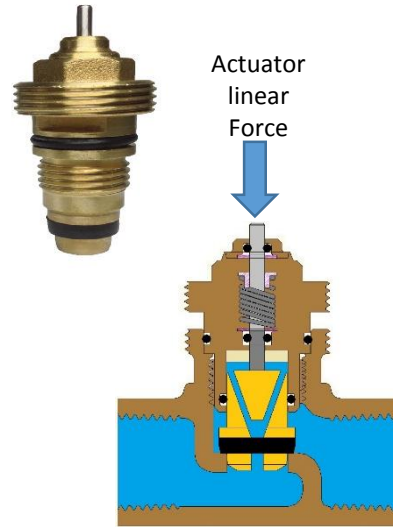

EP

The EP type cartridge close off is directly related to the linear force that an actuator can generate.

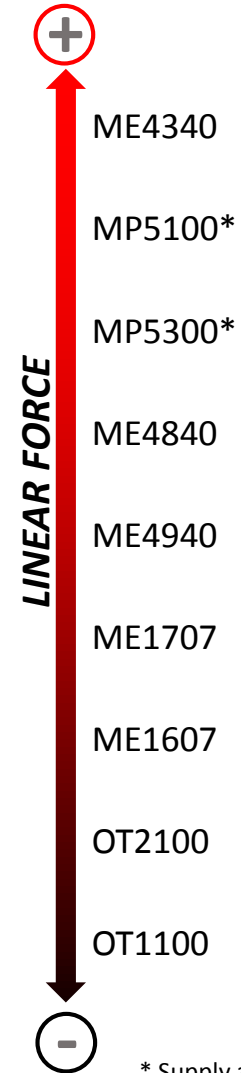

EB

The EB cartridge is an Hydro-Balanced cartridge, it uses the system pressure to increase the resulting close-off pressure. It requires a minimal force from the actuator to achieve 100% close-off. Any actuator can close 100PSI

Actuator Relative Linear Force

CHECK SPECIFIC ACTUATOR DATASHEET FOR EXACT LINEAR FORCE
Not all actuator models are shown

* Supply air pressure affects close off.
