

SPARTAN PERIPHERAL DEVICES

PROJECT TAGGING

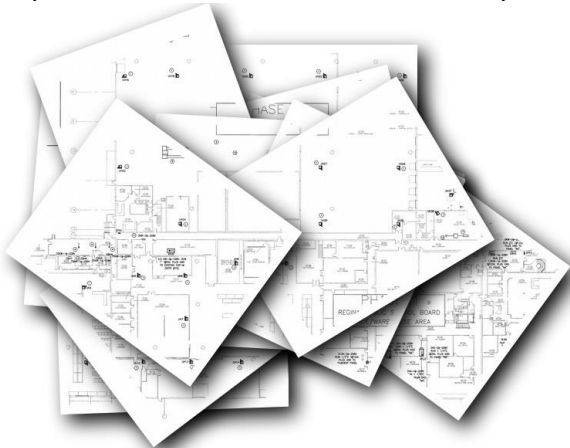

Spartan's project tagging service allows a custom label to be assigned to each valve body with the corresponding HVAC unit they are allocated to.

These will be assigned from a submitted valve schedule.

Boxes will also be tagged accordingly.

Tagging Process:

Based on engineering drawing, a valve schedule in spreadsheet format is submitted to Spartan.

Once the order is processed a relation table will be generated.

This new tag schedule will give you:

- 1- Valve tag number, Spartan model number and in which box they were packed.
Sorted by TAG number
- 2- Spartan model number, Valve tag number and in which box they were packed.
Sorted by Spartan model number

2012-06-19

All actuators (motors) will be boxed in the same box as the valve assembly. Each actuator is individually labelled.

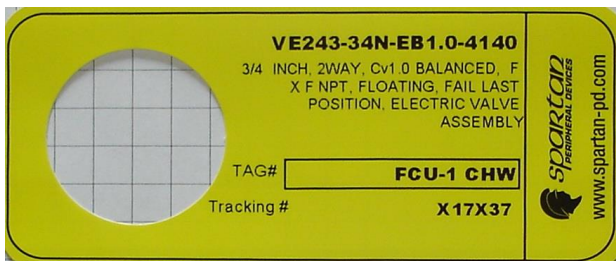

SPARTAN PERIPHERAL DEVICES

PROJECT TAGGING

Each valve body will have a yellow tag attached to the corresponding valve body assembly. The label contains the full KIT part number, the description as per packing slip, the TAG number that corresponds to the engineering valve schedule and the tracking number which corresponds to the project PO#.

Each box containing the valve actuators will be labelled with a unique PROJECT TAGGING label showing a complete list of products.

This will allow the quick sorting of different valves with different mountings and different flow coefficients.

****Please make sure label is removed from soldered valve bodies before soldering.****
